

Platform-ZERO

**ACHIEVING ZERO DEFECT MANUFACTURING
FOR THE PHOTOVOLTAIC INDUSTRY**

The Manufacturing Partnership Day - 26/09/2023

Victor Izquierdo Roca

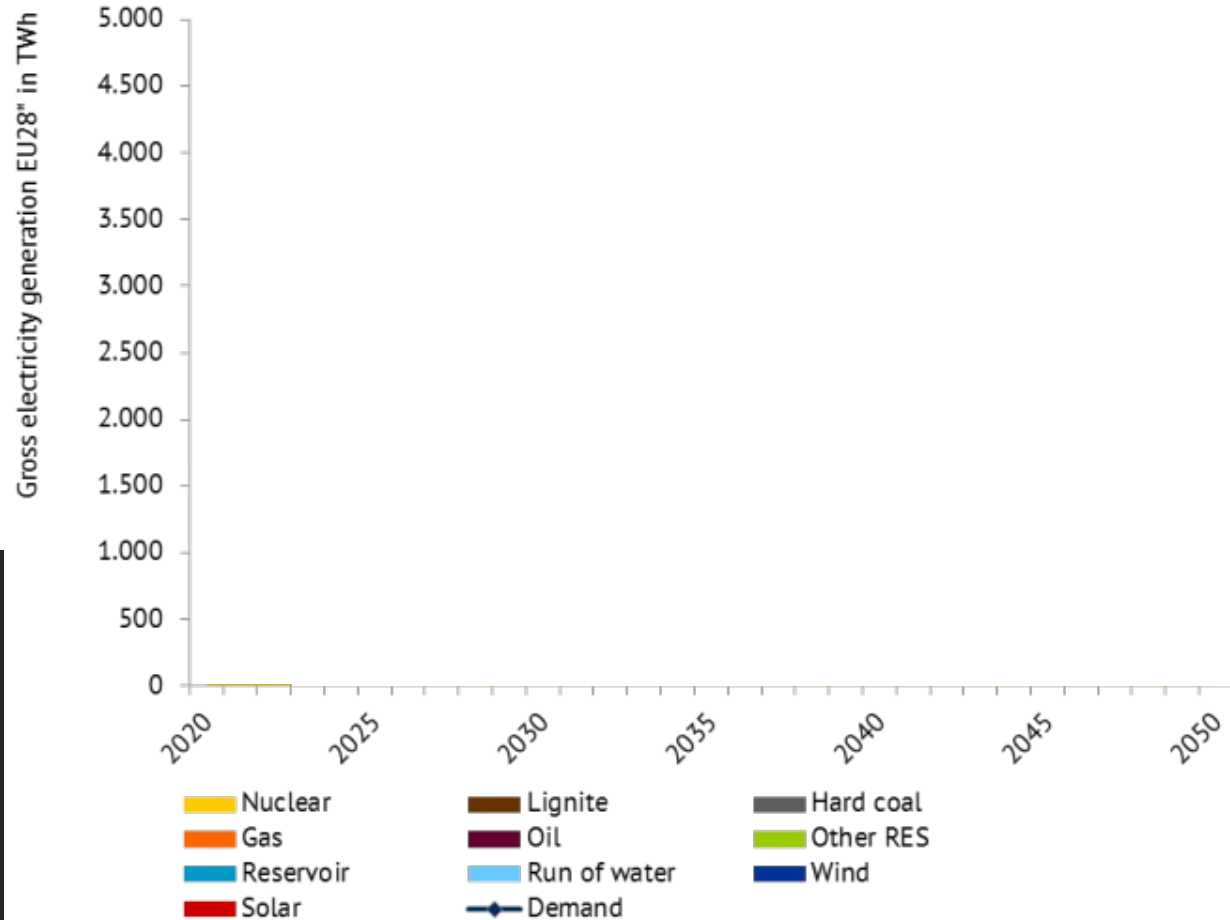

Co-funded by
the European Union

EU Energy mix

The CONTEXT

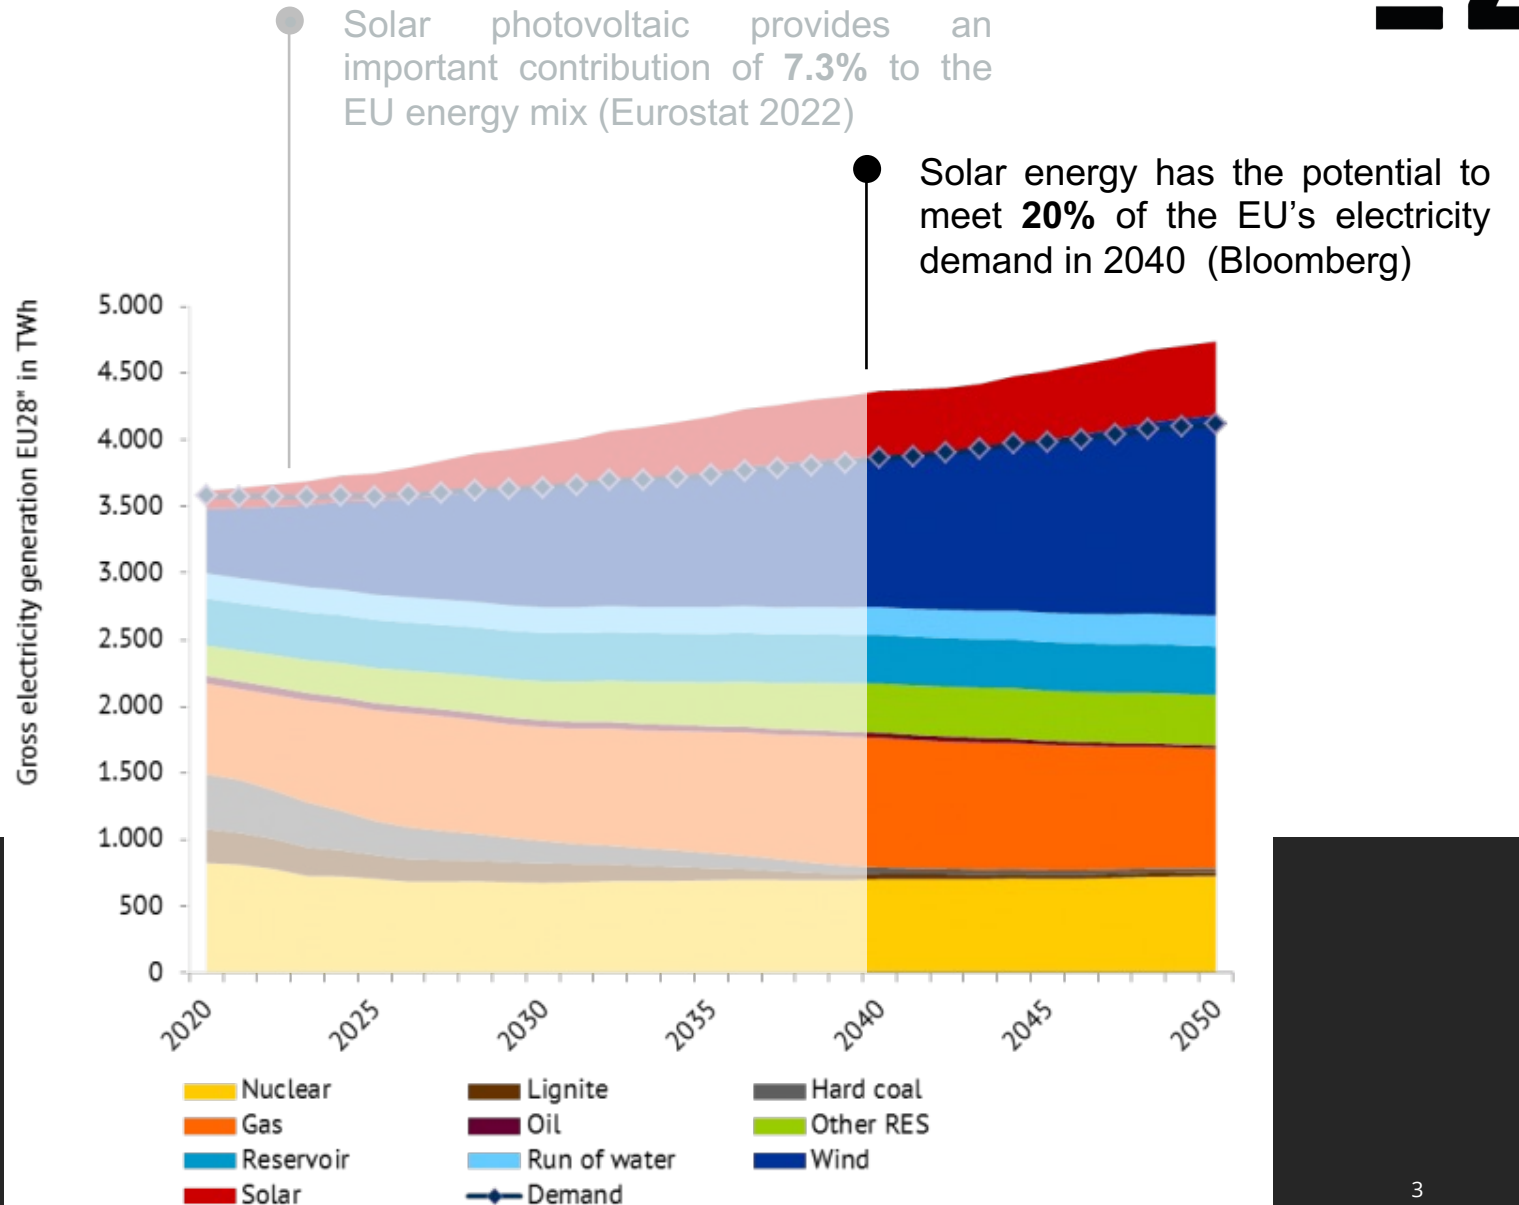

In the NEXT YEARS

... it requires increase the production of EU's PV manufacturing industry

The CONTEXT

Need for a competitive PV industry

The latest PV technologies combine high performance with a strong customizability and flexibility for integration in many applications: buildings, vehicles, agrivoltaics, infrastructures...

Besides production, the competitiveness of EU's PV industry also needs to be increased → new PV technologies with higher quality and performance that provide an added value

New PV technologies are key for EU's ecologic transition

Towards ubiquitous integration of PV

The CONTEXT

HOWEVER

Materials

- ITO, AZO
- i-ZnO, (Zn,Mg)O
- CdS, Zn(O,S)
- Cu(In,Ga)Se₂
- Cu₂ZnSn(S,Se)₄
- Cu₂SnSe₃
- Sb₂Se₃
- SnS
- Mo(S,Se)₂
- Mo, TCO
- Glass, steel, polyimide

Critical parameters

- Resistivity, transmittance
- Thickness, coverage, composition
- Coverage, doping, band alignment
- Composition, bandgap, thickness, crystalline quality, doping, boundary passivation, secondary phases
- Orientation, thickness, alignment
- Adherence, conductivity
- Composition, thermomechanics

...and complex multi-process, multi-technique production processes

This complexity makes PV devices prone to the appearance of critical **defects during manufacturing**, leading to significant **production waste and low quality**

The latest generations of PV present a high-complexity: multi-layer, multi-material, micro- and nano- stack structures...

It is necessary to progress towards the digitalization of PV industrial manufacturing → Process Monitoring

The CONTEXT

The PROJECT

Platform-ZERO...

...develops a new customizable in-line process monitoring platform, supported by Artificial Intelligence, for achieving zero-defect manufacturing for the PV industry

HE Grant agreement ID: 101058459 Start date: 1-1-2023 → End date: 31-12-2026

PV industry

The AIMS

Create dedicated optical and spectroscopical based sensors compatible with fast non-destructive in-line monitoring in the PV industry

1) Development of advanced sensor stations

The A²MS

Create non-supervised methods
for fast data analysis, data
management and decision-
making using A² and big data
management

1) Development of advanced sensor stations

2) A² system for autonomous monitoring and control

3) Implementation of a big data management infrastructure and control system

The A²MS

Develop automatized modular and customizable process monitoring platform prototypes with easy industrial integration

1) Development of advanced sensor stations

2) A²system for autonomous monitoring and control

3) Implementation of a big data management infrastructure and control system

4) Implementation and installation of functional process monitoring platforms

The A²MS

Demonstrate the effectivity of the technology in real operation conditions (4 demonstrators) for increasing PV productivity by:

- 1) Minimizing the economical and ecological impact of production waste
- 2) Improve production quality of PV devices

1) Development of advanced sensor stations

2) A²system for autonomous monitoring and control

3) Implementation of a big data management infrastructure and control system

4) Implementation and installation of functional process monitoring platforms

5) PV manufacturing optimization

Expected direct impacts:

- **10% increase in productivity of the EU's PV industry**
- **10% decrease in consumption of high-value critical raw materials**

Expected indirect impacts:

- **Provide new tools for optimization the EU's semiconductors industry**
- **Provide solutions for research acceleration through automatized methodologies and technologies for materials and devices inspection and analysis**

OUTCOMES

The Consortium

Projects is developed by

- **Four research centers** and **one university** with a strong knowledge in the development of spectroscopic methodologies, imaging, artificial intelligence and data management
- **A Metrology SME** with strong know-how in the implementation of industrial process monitoring applications
- **Two SMEs** in charge of dissemination, exploitation and communication actions

The Consortium

... and the innovations will be tested and demonstrated at TRL 7 in 4 PV industrial pilot plants across Europe

PHASE 01
Mapping
6 month

Definition of industrial specifications and reference sample fabrication

PHASE 02
Development of platform elements
1.5 years

Advanced sensor station design & development

AI System development

Data Management & Control Unit Development

PHASE 03
Implementation
1 years

Platform Implementation & installation of demonstrators

PHASE 04
Testing
1 year

Test and Validation of Demonstrators

Start Date
1-1-2023

↑
NOW

Design and testing of concepts

End Date
31-12-2026

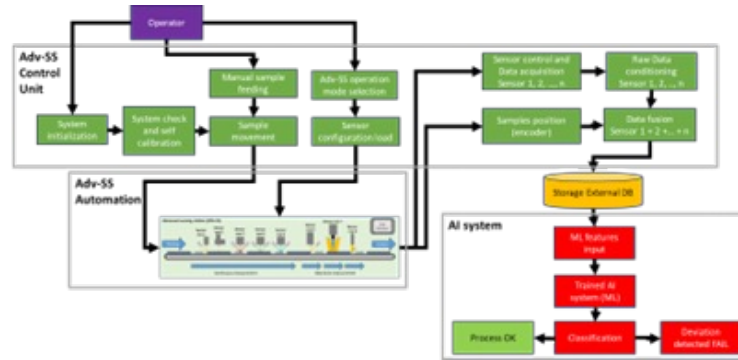

TECHNICAL MAPPING & METHODOLOGY

PHASE 01
Mapping
6 month

Definition of Industrial Specification and Reference sample fabrication

Definition of full process monitoring flow of the Platform-ZERO process monitoring platform as well as the specifications, requirements and constraints of the implementation of the process monitoring platform at the different 4-demo sites.

Fabrication of reference samples.

Inspection time
Space weight limitations
size thickness
Sample format Others
Measurement configuration

MAIN PROJECT RESULTS (9 month)

Advanced sensor station design & development

PHASE 01 Mapping 6 month

Definition of Industrial Specification and Reference sample fabrication

PHASE 02 Development 1.5 years

Design of a sensor station architecture easily customizable to different production configurations:

- ❖ Sheet-to-Sheet
- ❖ Roll-to-Roll
- ❖ "Stages"

StS configuration (conveyor)

RtR configuration (Roll control)

Stages configuration

Start the design of integrable optical and spectroscopical sensors

MAIN PROJECT RESULTS (9 month)

PHASE 01 Mapping 6 month

Definition of Industrial Specification and Reference sample fabrication

PHASE 02 Development 1.5 years

Advanced sensor state

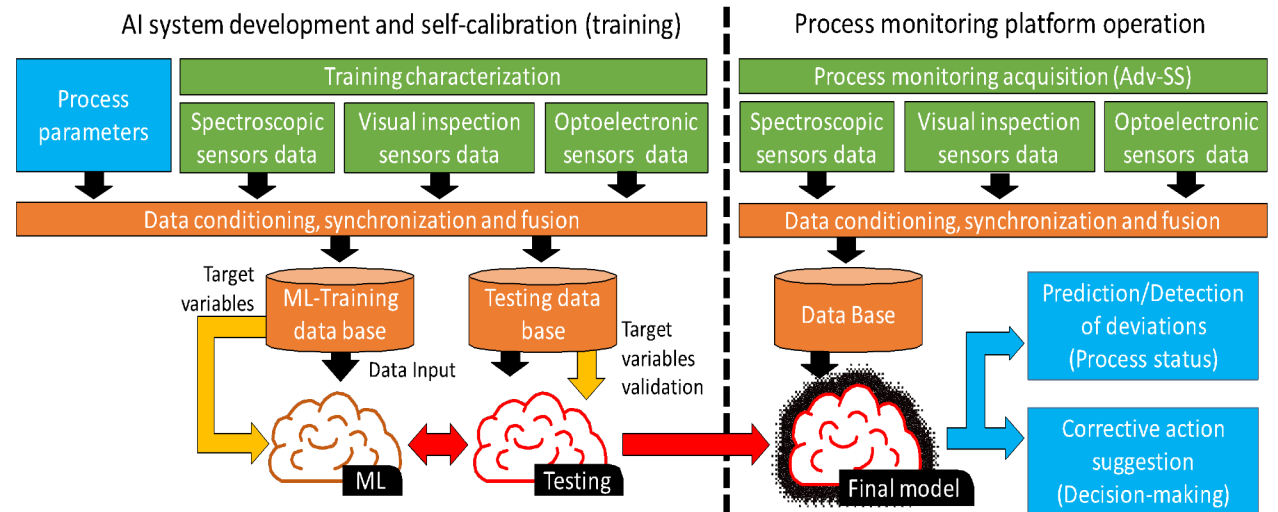

AI System

Data Man

AI System development

Design and definition of AI flow diagram including the training mode and operation mode

MAIN PROJECT RESULTS (9 month)

PHASE 01 Mapping 6 month

Definition of Industrial Specification and Reference sample fabrication

PHASE 02 Development 1.5 years

Advanced sensor state

AI System

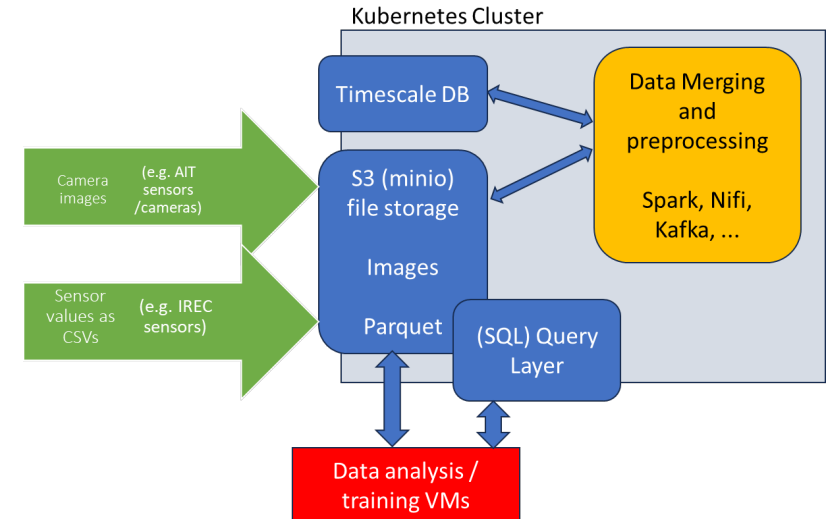

Data Management

Data Management & Control Unit Development

Creation of protocols for data fusion and tracking

Design of 1st version of DB architecture and data management infrastructure

MAIN PROJECT RESULTS (9 month)

PHASE 01 Mapping 6 month

Definition of
Industrial
Specification and
Reference sample
fabrication

PHASE 02 Development 1.5 years

Advanced sensor station design & development

AI System development

Data Management & Control

DESIGN OF SEMI-AUTOMATIZED
MODULAR SENSORS
PROTOTYPES
